

Dr. Bonny P McClain is a member of the National Press Club, 500 Women Scientists, Investigational Reporters and Editors, Association of Healthcare Journalists, and past member of the National Association of Science Writers allowing access to a wide variety of health policy and health economic discussions.

It is this 360-degree perspective that has made Bonny a sought-after collaborative partner as a data analyst, data literacy and fluency coach and consultants as well as healthcare journalist and advocate.

Bonny applies advanced data analytics to discussions of poverty, race, and gender. Her research focus targets judgements

about social determinants, racial equity, and elements of intersectionality to illuminate the confluence of metrics contributing to poverty.

In the absence of the policies, barriers, and themes of social inequality, power, social context, and complexity race is a poor biologic proxy and remains a social and political construct.

In order to influence change or pathways to mitigate factors contributing to "poverty" we need to evaluate the measures that influence the social context. Core themes of racism, class exploitation, sexism and nationalism and heterosexism all contribute to social inequality. Professionally and personally she redefines how we measure these attributes and how we can more accurately identify factors amenable to intervention.

Bonny is a Tableau User Group Leader and Data Analytics Professional working to improve data literacy through education, Tableau skill integration, as well as R, Python, and Tableau Prep tools exploring large datasets and curating empathetic answers to larger questions...making a big world seem smaller.
